

On **Thursday 14th June 2018**, Year 1 visited the Thinktank. They took part in a workshop 'Colour me a rainbow' which linked to our Science topics - materials and seasonal change. They also took part in an interactive story, where they learnt about sources of light, took part in a shadow puppet play, and worked out why a transparent material is best for growing sunflowers. They also experimented with rainbows.

After that they were able to experience the rest of the museum: steam engines, robots, animals and many more.

They also had lots of fun and learnt lots of new things in the impressive Science Garden.
